

## **13th International Conference on Mercury as a Global Pollutant, July 16–21, 2017 Providence, Rhode Island, USA,**

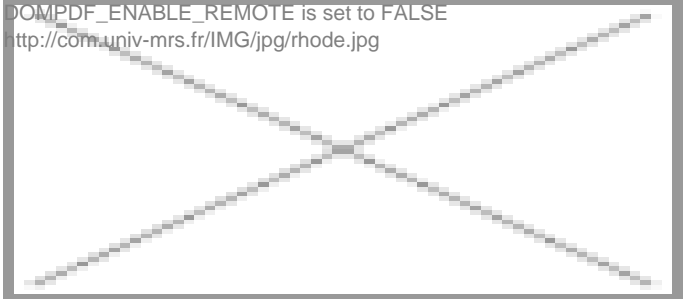

Notre collègue Lars-Eric Heimbürger participera à cette conférence internationale, dont il est par ailleurs co-organisateur, pour y présenter les travaux réalisés et les résultats obtenus lors la campagne d'intercalibration GEOTRACES pour les mesures de la spéciation du mercure en milieu marin

The International Conference on Mercury as a Global Pollutant is shaping up to be a very large and diverse event with participants from people representing 57 countries !

Mercury is a global pollutant and its effective control in the environment will take scientific study, innovative technologies and policy. ICMGP conferences have been committed to better understanding and effectively managing mercury releases. The benefits from the conference will be greatest if we achieve the highest level of diversity of participants in terms of gender, age, and professional background. We welcome all with an interest in mercury and its management to gather at the ICMGP 2017 in Providence, Rhode Island, USA.
